

UPDATE:

The Online Version !! README file.

The new version of this Space Paranoids game, I recreated, was created to run only on a KIOSK mainframe system. Called TROFF with a automatic install setup.

It was not planned to bring it back Online.

To run this game good, it needs a small manually Install

The install is simple:

First install the 2 fonts, tr2n & TRON 2, simply click the .TTF files and chose install

Its better the view is right in the game.

Then..

Click the file below: IMPORTANT NOTE, make sure no browsers are running !

Install this first

It's a driver that makes the discontinued Unity driver active for the game engine to work.

Note, this driver runs on OSX versions of Leopard, best on Snow Leopard and Safari for browser, i use browser ArcticFox, it's discontinued, but you can find versions to download.

Windows users can find a older Unity driver, and try it on older browser software (Unity Player version 3.4.0f5 (fca068e21211)). (c) 2011 Unity Technologies ApS. All rights reserved.)

Problem is, Unity created new updated program tools and player drivers and deleted this one.. making this being the end of Space Paranoids.. but with search with luck. The player was free.

On OSX mountain Lion it can work. OSX El Capitan and newer OSX versions still Problems. Thats because all new browsers use newer certificate security software, making Unity trying to block this driver.

Do not accept updates for this driver !!! when asked. !!

Then click or better drop the file below on your Safari browser or ArcticFox browser,.. and there you go..
